Note regarding the chemicals constituting Burnblock® being natural occurring

DTI has performed a survey regarding the substances in Burnblock® based on the formulation provided by Burnblock® on 21th of July 2014.

The conclusion is that all (100%) of the different chemical substances constituting Burnblock® are natural. Either as occurring naturally in fruits and vegetables or as found in nature in its dissociated form.

The individual chemical elements constituting Burnblock® are regarded as "found in nature".

This document does not deal with issues related to toxicity or sustainability of Burnblock® or the individual chemical elements in the compound.

Best regards
